Man Machine Interface

PAMMI

The PAMMI software provides connection and control of the Honeywell D1 Voice Alarm system via a graphical user interface on a Microsoft Windows® based personal computer.

Honeywell D1 Voice Alarm System

The graphical user interface can be customized with individual background pictures, logos and zone configurations. For graphics, a bitmap is utilised and the building is divided into zones. The lower half of the screen is filled with the message windows and software keys that may be given different functions and names. These keys are used, for example, to display various groups of digital announcement texts, or as action keys.

In combination with a Honeywell SCU (System Communication Unit) individual pre-recorded audio messages can be played (DVA – Digital Voice Announcement function). The PAMMI is built up of several software modules which are individually configured to suit the hardware specifications of the Honeywell D1 Voice Alarm system and the building design.

FEATURES

- Full-screen application, may be operated with touch screen
- Graphic display (e.g. building layout)
- Zone scheme with selection and status
- Recording, store and forward, pre-listen and discarding of announcements (with SCU)
- Simultaneous playback of prerecorded audio messages (with SCU)
- Scheduler function for automatically broadcasting audio messages
- System status indication and logging
PAMMI Technical Specifications

Connections
The PAMMI is connected via Ethernet to the Honeywell D1 Voice Alarm system.

Hardware
PAMMI will work on any standard Windows based personal computer with no special extension cards or expensive equipment needed.

PAMMI System Requirements
- Standard PC with Intel Pentium 4 or higher
- 1 GB RAM or higher
- Free hard disk space min 200MB
- CD-ROM / USB
- Network card 100 Mbit or higher
- Microsoft Windows® 2000 / XP Professional / Vista / 7 compatible
- Monitor with 1280 x 1024 pixel (ratio 4:3, 16:9 not supported)
